

BARDO FINGER FLEX

We designed these wheels from hundreds of slashed, coated abrasive sanding strips (fingers), which make this wheel ideal for all types of applications where flexibility is a key component. Since this wheel easily conforms and shapes to all types of mouldings, it is perfect for applications of short, medium and long moulding runs (architectural millwork, cabinet door manufacturing, hard and softwood mouldings, etc.). It is ideal for white wood, sealer and topcoat finishing. It is available in grit ranges of 80–320 and sizes that include 8" OD x 2" ID, 8 x 3, 8 x 4 and 10 x 6. There's no hassles of replacing loadings or switching out brushes because of the unique design! When the wheel is finished, just throw it away! It is offered in several arbor hole sizes and with the heavy duty wheel construction there is no need for extra mounting plates. Just put the wheel on your shaft, tighten it down and you are ready to go!
